US-08-460-462-2

Patent No.

, Application US/08460462 5670623

GENERAL INFORMATION:
APPLICANT: Shoieg

APPLICANT:

Goldstein, Marc A. Doi, Roy H. Shpiegl, Itai Shoseyov, Oded

COMPUTER READABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER: IBM PC compatible
COMPUTER: FIRE PC COMPUTER: PC-DOS/MS-DOS
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0,

CITY: New York STATE: New York

ZIP: 10036 COUNTRY:

U.S.A.

STREET:

ADDRESSEE: PENNIE & EDMONDS STREET: 1155 Avenue of the Americas

MOLECULE TYPE: protein US-08-048-164A-2

TELEX: 66141 PENNIE INFORMATION FOR SEQ ID NO: 2:

TELEFAX:

TELEPHONE:

(212) 790-9090 (212) 869-8864/9741

SEQUENCE CHARACTERISTICS

LENGTH: 162 amino acids
TYPE: amino acid
TOPOLOGY: linear

FILING DATE: 14-APR-1993
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Misrock, S. Leslie
REGISTRATION NUMBER: 18,8

APPLICATION NUMBER: US/0: FILING DATE: 14-APR-1993

US/08/048,164A

REGISTRATION NUMBER: 18,872
REFERENCE/DOCKET NUMBER: 78
TELECOMMUNICATION INFORMATION:

7809-003

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible

The method comprises administering an immunogenic amount of a salmonis specific antigen termed oppa, or an immunogenic fragment of p. salmonis specific antigen termed oppa, or an immunogenic tragment of particularly polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen p. salmonis. The method is also useful for protecting against salmonid p. salmonis. The method is also useful for protecting against salmonid sequence represents the amino acid sequence of C17E2, a p. salmonis OspA sequence represents the amino acid sequence of C17E2, a p. salmonis OspA construct optimised for expression in Escherichia coli, fused to an undefined N-terminal fusion partner. The fusion protein is used in a undefined N-terminal fusion partner. The fusion protein is used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (BURI/) BURIAN J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a method for the protection against infection of a polkinchermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a salmonis specific antigen termed OspA, or an immunogenic fragment of P. salmonis specific antigen termed OspA, or an immunogenic fragment of particularly polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen pathonis. The method is also useful for protecting against salmonid P. salmonis ospA protecting against salmonis sequence represents optimised P. salmonis OspA protein 17E2. The DNA sequence represents optimised P. salmonis OspA protein 17E2 (AAF86247) has been optimised for expression in Ecsherichia coli. An OspA protein with an N-terminal fusion partner is Ecsherichia coli. An OspA protein with an N-terminal fusion partner is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17-SEP-1999;

The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly poikilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents P. salmonis OspA protein. An OspA protein with an N-terminal fusion partner is used in a vaccine to create an anti-OspA antibody recents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           02-NOV-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fiber in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to methods and compositions for cross-
linking and/or modifying the properties of polysaccharide materials.
The method involves treating the polysaccharide structure with a
polysaccharide binding domain (PBD) fusion protein. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 1.2; Fig 1e-1g; 121pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Levy I,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Preparation of a polysaccharide containing material having at least one desired structural, chemical, physical, electrical and/or mechanical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB;

The present invention relates to methods and compositions for cross-
CC linking and/or modifying the properties of polysaccharide materials.
CC The method involves treating the polysaccharide structure with a
CC polysaccharide binding domain (PBD) fusion protein. The method is
CC used to alter the structural, chemical, physical, electrical and
CC mechanical properties of polysaccharide materials such as paper,
CC yarns, fibers and textiles, using biological crosslinking agents.
CC yarns, fibers and textiles, using biological crosslinking agents.
CC properties such as wet strengths, durability and elasticity. The PBD
CC reagent is applied in the forming stage in fluting paper manufacture
CC which eliminates the sizing step. The use of a biological crosslinker
CC improves the recyclability of paper products. The PBD reagent maintains
CC improves the recyclability of paper products. The pBD reagent maintains
CC infine fibers in a slurry therefore resulting in better recovery of
CC the fine fibers in a slurry therefore resulting in better recovery of
CC which enhances the ability of the alkaline glue used in binding to

The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is Clostridium cellulovorans cellulose binding domain (CBD) cross linker protein (CCP).

Note: This sequence is stated to be the same as that shown as SEQ ID NO: 6 in the sequence listing of the specification. However this sequence has an additional residue at its C-terminal.
                                                                                                                                                                                                                                                                                                                                                                                                      Cellulose binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAR63634 standard; Protein; 162

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAQ72917/R63634 is a novel isolated cellulose binding domain. It pref. binds crystalline with a Kd ranging from 1.5 microM. 0.5 microM. C pref. with a Kd of <1.2 microM, esp. <1.0 microM. The protein and C the encoding DNA are claimed, as is a CBD fusion protein fep? C comprising the CBD and a second protein. The second protein is pref. C reversing the CBD and a second protein. The second protein is pref. C an environmental pollutant, or an HSP, HSP antibody, cross-reactive HSP-related protein or an antigenic portion of this. The CBD and FP C may be used in drug delivery, affinity sepns. and diagnostic techniques. CBD nucleic acid may be obtd. from a variety of cell c sources that produce CBDs that bind with high affinity and in a c source of CBD encoding nucleic acid is C. cellulovorans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polysacharide binding domain (pBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysacharide meterials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD properties such as wet strengths, durability and elasticity. The PBD properties such as wet strengths, durability and elasticity. The PBD properties such as the forming stage in fluting paper manufacture reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains improves the recyclability of paper products. The PBD reagent maintains raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (CBDT-) CBD TECHNOLOGIES LTD.                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                  mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                   binding domain (ProtA-CBD). This sequence contains a part of CBP A protein and a part of protein A derived from pRTT2T vector sequence Note: This sequence is stated to be the same as that shown as SEQ ID NO: 8 in the sequence listing of the specification. However this sequence has 2 additional residues at its C-terminal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Levy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to methods and compositions for cross-
linking and/or modifying the properties of polysaccharide materials.
The method involves treating the polysaccharide structure with a

                                        bioluminescence-generating systems, assays, screening methods, diagnostic method and articles of manufacture. They can be expressed using e.g. bacterial, yeast, fungal, plant, insect or animal cells. The Renilla mulleri, Gaussia and Pleuromamma luciferase or Renilla or Ptilosarcus GrPs can be used in e.g. toys, cosmetics, fountains, personal care items, fairy dust, beverages, soft drinks, foods, textile products, bubble bath, balloons, personal items, dentrifrices, soaps, body paints, bubble bath, ink or paper products. In particular, they can be used in e.g. squirt guns, pellet guns, finger paints, foot bags, greeting cards, slimy play material, clothing, bubble making toys, bath powders, cosmetics, body lotions, gels, body powders, body creams, toothpastes, mouthwashes, soaps, body paints, bubble bath, inks, wrapping paper, gelatins, icings, frostings, greeting cards, beer, wine, champagne, soft drinks, icings, ice, dry ice or fountains. The nucleic acids can also be used to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (PROL-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Clostridium cellulovorans
                                                                       This sequence represents a cellulose binding domain (CBD) derived from the CbpA protein of Clostridium cellulovorans. The sequence is used the construction of a fusion protein which can be used in diagnostic immunoassays, e.g. to detect heat-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility to it. The CBD, has very high affinity for cellulose (including to it. The CBD) and chitin (dissociation constant 0.8-1.4 mu M), but crystalline forms) and chitin (dissociation constant 0.8-1.4 mu M), but crystalline forms) and chitin (dissociation constant 0.8-1.4 mu M) a wide pH range and is not released from cellulose by washing with water.

                                                                           This sequence represents a fusion protein (CBD-KpnI) composed of the Cb protein cellulose binding domain (CBD) from Clostridium cellulovorans This protein is used in diagnostic immunoassays, e.g. to detect heat-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility to it. The CBD has very high affinity for cellulose (including crystalline forms) and chitin (dissociation constant 0.8-1.4 mu m), but has almost no cellulolytic or amorphogenic activities. The CBD binds over a wide pH range and is not

                                                                                                        Matches
                                                                                                                                                                                             This sequence represents a fusion protein composed of the CbpA protein cellulose binding domain (CBD) from Clostridium cellulovorans and a heat shock protein (HSP) fragment. This protein is used in diagnostic immunoassays, e.g. to detect heat-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility to it. The CBD has very high affinity for cellulose (including crystalline forms) and chitin (dissociation constant 0.8-1.4 mm M), but has almost no cellulolytic or amorphogenic activities. The CBD binds over has almost no cellulolytic or amorphogenic activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-OCT-1994;

The CBD molecule can be modified with the hapten without affecting its high affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cellulose binding domain; CBD; hapten; moiety; biotin; avistreptavidin; affinity chromatography; cell separation, cell immobilisation; protein immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; enzyme immobilisation; e
